Dear Customer, thank you for purchasing the product of our company. In the interest of safe use and long-term satisfaction with our products, please read the following instructions:

USER'S MANUAL FOR GREEN SPA SELF-WATERING PLANTER

IMPORTANT! READ INSTRUCTIONS CAREFULLY

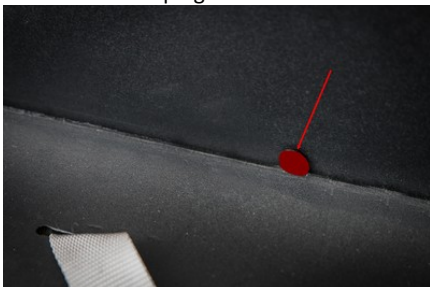

Green Spa self-watering planter lets you adjust level of irrigation to suit the need of individual plant. System of irrigation, by itself, supplies water to the roots of a plant. In a very easy way, it lets you provide the exact amount of water to suit the needs of each plant by having adequate number of watering stripes. Water level indicator informs about the need to fill the water container, that supports water distribution through watering stripes. Planter is equipped with 6 watering stripes. Before planting take into consideration, how much water the plant needs and where it will be placed (amount of sunlight and shade).

Overflow outlet inside the planter

(removes excess water, preventing the soil from over soaking)
WARNING!!! You need to remove the plug when outdoors.

Leave the plug in when indoors.

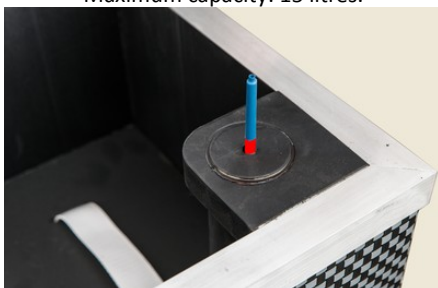

Water inlet

Used to fill planter with water and adding fertilizers

Water level indicator - full container

Water should be added until the marker is seen on the indicator.
Maximum capacity: 15 litres.

Water level indicator - empty container

Water should be added no later, than when less than 1 cm of the indicator is seen.

Purpose: For outdoor use. Planting ornamental plants intended for growing in containers, designed to use in places such as balconies, gardens, winter gardens, terraces.

Terms of use: Planters should be placed only on hard, flat surfaces. Do not fill with soil more than 5cm from top edge of planter's wall. Planters should not be placed closer than 2,5m from active gas heaters, fire sources, but also tree branches, electrical wires etc. Planter should not have extended contact with high heat. While carrying the planter you should hold it from below, by the frame. Do not push or pull the planter by its side wall! Do not overload the planter! Do not stand or seat on the side walls. In case of defect of the product, immediately remove it from usage.

Maintenance: To extend life of the planter it should be regularly cleaned and maintained. Remove dust as often as possible. Clean it with wet cloth. If needed, you can use mild cleaning agent, then clean the surface cloth until dry. Never use bleaches, acids or dissolvents to clean the planters!
